

# Data Types\Number\ Expression

the result of this evaluation can be used to activate other responses.

## Example

In the example below when the "Import\_UPS" geometry is clicked "**Evaluate Number Expression**" is executed. The expression is simple `math.sqrt(16)`, and the result is linked to the "**Set Number Variable**" node, in "**result**" variable. This variable is then linked to a "Variable Writer" to display it.
